Abstract (en)

[origin: CA3160941A1] The invention relates to a photopolymerisable relief precursor comprising (A) a dimensionally stable carrier, (B) a photopolymerisable relief-forming layer at least containing a crosslinkable elastomeric binder, an ethylenically unsaturated monomer, a migration-capable, surface-active additive, a photoinitiator activatable with UVA light and a photoinitiator activatable with UVC light. The invention further relates to a method for producing a relief structure.
