Abstract (en)

[origin: WO2021123833A1] A component for an article for use in an aerosol delivery system includes a body of fibrous material comprising first and second additive release components embedded within the body of fibrous material. The first and second additive release components each have a maximum diameter between about 1.5mm and about 2.5mm and the first and second additive release components are separated by a distance of less than about 2.5mm. There is also provided an article including the component and a system including the article and a non-combustible aerosol provision device for heating the aerosol generating material of the article. A manufacturing method is also provided.
