Abstract (en)
[origin: WO2021123844A2] The present disclosure relates to an article for use in a non-combustible aerosol provision system, the article comprising an aerosol generating material and a downstream portion downstream of the aerosol generating material. The downstream portion comprises a cavity surrounded by a tube comprising a wall, and wherein said tube is a paper tube and has a wall thickness of at least 325 microns and/or the wall has a permeability of at least two Coresta Units. The present disclosure also relates to an article wherein said tube has an axial length of at least 12 mm and is located adjacent to the aerosol generating material, and wherein said tube has a wall thickness of at least 325 microns and/or the wall has a permeability of at least two Coresta Units. The present disclosure also relates to an article for use in a non-combustible aerosol provision system, the article comprising: an aerosol generating material; a downstream portion downstream of the aerosol generating material; a first wrapper comprising sheet material; and, a component that abuts at least a portion of the first wrapper, wherein the first wrapper comprises a plurality of formations configured such that one or more gaps are provided between the first wrapper and the component. The present disclosure also relates to a non-combustible aerosol provision system.
