Abstract (en)
[origin: WO2021124212A1] The present invention relates to a surgical device for surgical grafting of a graft constituted by bone-tendon-bone in a dislocated and/or subluxated joint. The device enables positioning the graft in a grafting site in the joint with great precision. In particular, the use of an abutment element (8) and of a locking element (7) enables the graft to be positioned at the graft site with high precision and stability.
