Abstract (en)

[origin: WO2021122608A1] The present invention relates to a perfume oil storage composition comprising at least one low-molecular gelling agent, at least one perfume oil and water, wherein the low-molecular gelling agent forms a dispersed phase together with the perfume oil. The present invention is furthermore directed to a method for preparing such a perfume oil storage composition, to means comprising such a perfume oil storage composition, to the use of such means for treating surfaces and/or when washing textiles and/or caring for textiles, to a method for the use thereof and to the use of a low-molecular gelling agent for stabilizing a perfume oil in water or an aqueous solution.
