Abstract (en)

[origin: WO2021122250A1] The invention relates to a label suction device (10) for a container labeling machine (1, 19, 20, 22, 24), having a label guide (11) which is provided with permeable suction openings and suction segments (13a-13) which are arranged on the label guide (11) one behind the other in the direction (14) of longitudinal extension thereof for providing a suction pressure on the label guide (11), wherein a separating wall (15) is arranged between each pair of adjacent suction segments (13a-13f). According to the invention, the label suction device (10) has a pressure influencing unit (17) for influencing the pressure in at least one of the suction segments (13a-13f) and at least one additional pressure influencing unit (17) for influencing the pressure in at least one other suction segment (13a-13f).
