Abstract (en)  
[origin: WO2021122559A1] The present invention relates to a packaging for aerosol-generating articles comprising a packaging body extending in a length direction, a width direction and a height direction and a lid attached to the packaging body via a first attachment section. The lid being pivotable with respect to the packaging body for opening and closing the packaging. The lid is further attached to the packaging body in a second attachment section, wherein the second attachment section comprises an inner surface and an outer surface facing the inner surface. The second attachment section is breakable and comprises at least a first and a second breaking line, wherein one breaking line extends from the inner surface towards the outer surface without reaching the outer surface and another breaking line extends from the outer surface towards the inner surface without reaching the inner surface. The second attachment section (6) has a predetermined width (w) from the inner surface (62) to the outer surface (72) and both the first and second breaking lines and/or cut extends at least over 50% of that width. The invention also relates to a foldable material blank to form such packaging..
