Abstract (en)
[origin: CA3160802A1] The invention relates to a pouring device (1) which is suitable for piercing and emptying granular material contained in vacuum packaging (P) and which comprises: - a tubular body (2) having a pipe (20) for conducting the material, the pipe (20) extending from an inlet mouth (21) located at a first end of the tubular body to an outlet mouth (22) for the granular material, located at a second end of the tubular body (2); - a hollow piercing tool (3) having a distal end terminating in a tip (30) and a widened base (31) at its proximal end, rigidly connected to the body. The device also comprises a shoulder (4) serving as a stop, configured to come into contact with the wall of the packaging so as to stop the pouring device when the wall is pierced by the piercing tool (3), and optionally a bowl (5) configured to return the granular material that escaped the hollow part of the piercing tool by gravity to the inside of the hollow part.
