Abstract (en)

[origin: WO2021122991A1] Various packaging systems and packaging kits are described. In one exemplary embodiment, a packaging system is provided and includes a base configured to receive a drug delivery device having a device body having an upper segment and a lower segment, and an actuator. The base is configured to house the received drug delivery device therein at a non-zero angle relative to a longitudinal axis of the base. The base includes a retaining cavity and a gripping cavity adjacent the retaining cavity. The retaining cavity is configured to create an interference fit with at least a portion of an upper segment of a drug delivery device received within the base, and the gripping cavity is configured to receive a lower segment of a device body and a portion of an actuator of a drug delivery device received within the base.
