Abstract (en)

[origin: WO2021122679A1] The invention relates to a container (1) for use in a beverage preparation machine. The container (1) has a non-symmetrical shape such that it is inserted functionally inside the beverage preparation machine with a specific orientation. The container (1) comprises a container body (2) having a back side (40) and a front side (3), the back side (40) and the front side (3) delimiting a compartment adapted to be traversed by water injected therein by the beverage preparation machine through the back side (40), and a plant material for preparing a tea beverage, the plant material being inside said compartment. The front side (3) comprises at least one discharge opening (31) arranged in the upper half, preferably arranged in the upper third part, of said front side (3) when said container (1) is functionally inserted in the beverage preparation machine in order to keep water in the compartment at a defined level (L) that is above the median height (M) of said container (1), before the tea beverage is dispensed outside said container (1), thus allowing soaking of the plant material in said water.
