Abstract (en)
[origin: WO2021121907A1] Shown is a door frame (22) of a lift system (2) having a lift shaft (4), wherein the door frame (22) forms a chamber (26) for receiving a control unit (32) and a side face (60) facing the lift shaft (4), the door frame (22) having a first door frame element (28.0) delimiting the chamber (26), a second door frame element (28.1) delimiting the chamber (26), wherein the first door frame element (28.0) can be released from the second door frame element (28.1) substantially by a movement (B, B') of the first door frame element (28.0) parallel to the side face (60) out of the closed position of the first door frame element and thus the chamber (26) can be opened; further shown is a lift system (2) having such a door frame (22).
