Abstract (en)
[origin: WO2021123511A1] The present invention relates to a foaming composition containing a foaming agent that is made up of at least one acid and at least one base, the base and the acid being able to react in the presence of water, producing carbon dioxide, the composition also containing an anionic surfactant, characterised in that the composition is in the form of a loose powder and in that it contains a mass percentage of said surfactant that is greater than or equal to 3% and is less than or equal to 4%, and in particular that is less than 3.5%, and/or a mass percentage of the acid(s) + base(s) mixture that is greater than or equal to 90%. The composition allows a foam to be obtained that allows excrement to be hidden, and splashes, rising odours and falling noises to be avoided.
