Abstract (en)

[origin: WO2021119688A1] The invention relates to a guide apparatus (1) for guiding a furniture part (2), in particular a sliding door or folding-sliding-door, comprising at least one guide rail (3) and at least one chassis (4) which can be connected to the furniture part (2) and which can travel on the at least one guide rail (3), wherein the at least one chassis (4) has at least one load-bearing roller (5), mounted about a first rotation axis (D1), for supporting the weight of the furniture part (2) and at least one supporting roller (6) for laterally guiding the furniture part (2), wherein the at least one supporting roller (6) is rotatably mounted about a second rotation axis (D2) which is oriented transverse to the first rotation axis (D1), at least one support apparatus (7) which is separate from the at least one supporting roller (6) is provided, which support apparatus is designed to relieve the at least one supporting roller (6) in at least one end position of the at least one guide rail (3) against a transverse force acting laterally, i.e. substantially parallel to the first rotation axis (D1).
