Abstract (en)
[origin: WO2021121513A1] A method for mounting a roller screen (1) for shielding a building aperture (3) in an inclined wall, which roller screen comprises a top casing (4), a bottom element (5), first and second side rails (6, 7), a mounting bracket (16) and a screen (10), the method comprising the steps of assembling a rectangular frame comprising the top casing (4), the bottom element (5) and the first and second side rails (6, 7), mounting the mounting bracket (16) on an inclined wall (35) of a building adjacent to a top wall (33) of the building aperture (3), bringing the rectangular frame into engagement with the mounting bracket (16) in such a way that the rectangular frame is carried by the mounting bracket to hang free, extending substantially vertically from the mounting bracket, and bringing the rectangular frame into abutment with the inclined wall (35) along all of the periphery of the building aperture (3).
