Abstract (en)
[origin: WO2021121457A1] The invention relates to a monitoring system (12) for a gas turbine (10), in particular for an aircraft engine. The monitoring system (12) comprises at least one borescope device (24) that is able to be mounted in a borescope opening (22) of a gas turbine housing (14) and has a housing (26) in which at least one optical sensor device (28) for acquiring images of at least one inner region of the gas turbine (10) is arranged, and an evaluation device (34) that is able to be coupled to the at least one borescope device (24) in order to exchange data and is designed to inspect the at least one inner region for the presence of a fault on the basis of the at least one image acquired by way of the sensor device (28). The invention furthermore relates to a borescope device (24), to an evaluation device (34) and to a gas turbine (10).
