Abstract (en)

[origin: WO2021121826A1] The invention relates to a fluid distributor (1) for an injection system (100), in particular a fuel distributor rail (1) for a fuel injection system (100) for mixture-compressing spark-ignition internal combustion engines, comprising a tubular main part (2) which is preferably worked in a single-stage or multi-stage forging process. The main part (2) is equipped with a first high-pressure outlet (9A), a second high-pressure outlet (9B), a third high-pressure outlet (9C), and a fourth high-pressure outlet, wherein the second high-pressure outlet (9B) is offset to the first high-pressure outlet (9A) in a first direction (X1) along a longitudinal axis (4) of the tubular main part (2) by a specified distance (24), the third high-pressure outlet (9C) is offset to the second high-pressure outlet (9B) in the first direction (X1) along the longitudinal axis (4) by the specified distance (24), and the fourth high-pressure outlet (9D) is offset to the third high-pressure outlet (9C) in the first direction (X1) along the longitudinal axis (4) by the specified distance (24).
