Abstract (en)
[origin: WO2021122043A1] The invention relates to an electrical housing (1) comprising a support plate (10) and a frame (20), the support plate and the frame comprising complementary attachment means (110, 260) which are movable relative to each other between a position in which the frame is attached to the support plate and a position in which the frame is released from the support plate. According to the invention, the frame comprises at least one lever (250) which is movable so as to forcibly move the attachment means into the release position, an elastic return means suitable for automatically returning the lever in one direction, and a means for retaining the attachment means in the release position.
