Abstract (en)

[origin: WO2021122050A1] The invention relates to a cable gland (300) for an electrical housing, comprising: - a support plate (310) which is made of a rigid material and has a substantially planar face (311) and comprises at least one opening (315) for receiving the cable, and - a seal (320) made of a flexible material which extends around the opening to provide a seal between the support plate and the rest of the electrical housing (10). According to the invention, the seal comprises a main portion which has a closed contour and which extends fully over the substantially planar face.
