Abstract (en)
[origin: WO2017148821A1] The invention relates to a window, door, or facade element with an outer frame made of outer frame bars and with a leaf frame made of leaf frame bars, wherein one or more of the outer frame bars and/or the leaf frame bars and/or another bar has/have at least the following features: - a base profiled section (300, 400) on which one or two or more securing grooves (20b, 21b) is/are provided that are open on at least one side, preferably in the same direction, wherein - a bridge element (100) has at least one securing limb (100b, 100c) which engages into one of the securing grooves (20b, 21b), and - at least one fixing section (151) of a fixing element (150) is arranged in at least one gap (S1, S2) between the at least one securing limb (100b) and the at least one securing groove (20b, 21b), said fixing section fixing the securing limb (100b) in the securing groove (20b, 21b) at least in a clamping manner and optionally in a form-fitting manner as well.
