Abstract (en)
[origin: WO2021130264A1] The present invention relates to a transparent composition comprising at least one amphoteric water-soluble polymer which comprises: - units A of a cationic monomer chosen from: acidified or quaternised salts of dimethylaminoethyl acrylate, acidified or quaternised salts of dimethylaminoethyl methacrylate, acidified or quaternised salts of dimethylaminopropyl acrylamide, and acidified or quaternised salts of dimethylaminopropyl methacrylamide, and mixtures thereof; - units B of 2-acrylamido-2-methylpropane sulphonic acid and/or the salts thereof; and - optionally units C of acrylamide, characterised in that the molar ratio between the units A of cationic monomer and the units B of 2-acrylamido-2-methylpropane sulphonic acid and/or the salts thereof is between 0.4 and 1.4.
