Abstract (en)

[origin: WO2021133856A1] A system for extracting a paste from a flexible pouch having a sealed nozzle includes an inflatable flexible enclosure adjacent to the pouch and an air compressor for controlling airflow into the flexible enclosure. The air compressor provides a first target pressure within the flexible enclosure, the first pressure resulting in a rupture of the sealed nozzle, and a second target pressure within the flexible enclosure. Further, the system includes a timer for measuring a target time for completing the extraction of the paste from the flexible pouch.
