Abstract (en)
[origin: WO2021130006A1] The invention relates to a detection device, in particular a weighing device, for a conveying system (12a), in particular for a conveying system (12a) of a filling plant, the conveying system (12a) being intended at least for transporting a product to be conveyed (14a; 14d), which in particular has been divided up, along a conveying path (16a; 16b; 16c; 16d). According to the invention, the detection device has at least one magnetic resonance unit (18a; 18b; 18c; 18d) to detect a resonance signal of the product to be conveyed (14a; 14d) while the product to be conveyed (14a; 14d) is transported along the conveying path (16a; 16b; 16c; 16d).
