Abstract (en)

[origin: WO2021130529A1] The invention is a plugging assembly comprising a male plug and a matching female plug used to interconnect functional unit and external cables in low-voltage switchgear. Depending on the location of the female plug the invention discloses two variations namely 'side-access' and 'rear-access'. The invention provides facility to connect to external cables with an improved cable protection mechanism. The invention also provides separate connector per phase to wire an indicator on the front cover of the low-voltage switchgear.
