Abstract (en)
[origin: EP4082503A1] A movable support device (1) for a person that includes a base plate (5) adapted to be movably arranged on a floor, the plate (5) having a base portion (6) delimited by first opposite ends (7, 8) along a second axis (X) orthogonal to the first axis (Z) and by second opposite ends (9, 10) along a third axis (Y) orthogonal to the first and to the second axes (Z, X), a structural support assembly (17) for supporting the upper limbs of the person in an evacuation position, the assembly comprising a first structure and a second structure (18) respectively fixed to the first ends (7, 8) and extending along the third axis (Z) beyond one of the second ends (9), a footboard (13) comprising at least one support surface (15) to support the feet of the person, first elastic means (14) that couple the footboard (13) to the base portion (6) resiliently parallel to the first axis (Z), wherein the base plate (5) defines an empty volume (11) adjacent to the base portion (6) along the third axis (Z) between the first and the second structures (18).
