Abstract (en)

[origin: US2022348369A1] A sealing machine for the sealing of packages comprises a sealing chamber in which packages can be sealed. The sealing chamber comprises a working platform on which packages can be conveyed; a chamber lid movable relative to the working platform between an open position and a closed position; a sealing mechanism for the sealing of packages; and a suction unit for suction of gas from a volume enclosed by the chamber lid and the working platform. The sealing machine further comprises a protective frame kinematically connected to the chamber lid, and the protective frame has apertures through which gas can flow from the outer space into the enclosed volume.
