Abstract (en)

The present invention refers to a capsule (1) adapted for containing an edible substance in sealed manner relative to oxygen and to be used in a beverage preparation device (10), whereby said capsule (1) presents a container part (2) and a sealing element (4) of annular shape provided as a loose piece, so that can be displaced along the side wall (22) and in the proximity of the upstream oriented surface of the rim region (24) of said container part (2), whereby said sealing element (4) is adapted so that can be pressed against said upstream-oriented surface of said rim region (24) when said capsule (1) is inside a product preparation device (10) in a position of readiness for preparing the product. The present invention further refers to a process of manufacturing a capsule (1) according to the present invention.
