Abstract (en)

[origin: EP4084291A1] Disclosed is a stator for an electric motor. The stator for an electric motor according to an exemplary embodiment of the present invention comprises: at least one coil; and a stator core which includes a yoke formed in a closed loop shape and a slot part extending a certain length from the yoke, wherein the slot part includes at least one first slot on which the coil is wound and at least one second slot on which the coil is not wound, and the at least one first slot and the at least one second slot form the same single phase.
