Abstract (en)  
[origin: EP4085770A1] A band for a smoking article includes crimped cellulose acetate fibers. The content of titanium oxide is set to a value in a range from 0 wt.% to 0.01 wt.%. The crimp ratio I (%) calculated by Equation 1 satisfies the relationship of Equation 2,  $\text{CrimpratioI\%} = \frac{L1 - L0}{L0} \times 100$  where L0 is a length of the band in a case where a load of 250 g is applied to the band having a length of 250 mm in a direction in which crimp of the cellulose acetate fibers is stretched, and L1 is a length of the band in a case where a load of 2500 g is applied to the band having the length of 250 mm in the direction,  $-11.7 + 1.2 \times \text{FD} + 0.00083 \times \text{TD} < \text{I\%} < 10.0 + 1.2 \times \text{FD} + 0.00083 \times \text{TD}$ .
