Abstract (en)
The present invention relates a filter assembly (10) for filtering a waste fluid discharged by a household appliance. The filter assembly (10) comprises a filter module (16) comprising a filter element (12) and a support (14) for said filter element (12), wherein the filter element (12) is removably couplable to the support (14), and a filter housing (18) receiving the filter module (16), wherein the filter module (16) is removably couplable to the filter housing (18). The support (14) comprises at least one first retention element (110) and at least one second retention element (120). The filter element (12) comprises at least one corresponding third retention element (130) configured to be removably coupled to said at least one first retention element (110) so as to allow a removable connection between the filter element (12) and the support (14). The filter housing (18) comprises at least one corresponding fourth retention element (140) configured to be removably coupled to said at least one second retention element (120) so as to allow a removable connection between the filter module (16) and the filter housing (18).
