Abstract (en)

[origin: WO2021140102A1] The present invention relates to a method for producing an interdental cleaning device (1) composed of a handle element (2) and of a brush element (3), wherein the handle element (2) is made from a fibre material, in particular from paper or cardboard, and the brush element (3) is connected to the handle element (2), wherein, for connecting the brush element (3) to the handle element (2), a receiving portion (2.1) of the handle element (2) is arranged around a connecting portion (3.1) of the brush element (3). The invention further relates to an interdental cleaning device (1) with a handle element (2) and with a brush element (3), wherein the handle element (2) is made from a fibre material, in particular from paper or cardboard, and the brush element (3) is connected to the handle element (2), wherein a receiving portion (2.1) of the handle element (2) is arranged around a connecting portion (3.1) of the brush element (3).
