Abstract (en)

[origin: WO2021185524A1] The invention relates to a method for provisionally ensuring the functional capability of a housing of a machine in the event of damage to the housing, the housing having a housing upper part and a housing lower part, which are detachably fastened to each other by means of housing flanges and by means of threaded bolts that extend through the housing flanges and are secured by means of nuts, the damage to the housing being at least one crack in one of the housing parts, which extends toward the other housing part. According to the invention, the housing is reinforced by means of support plates, which are each fastened to the outside of the housing flanges. The invention also relates to a housing reinforced by means of support plates of this type.
