Abstract (en)

[origin: WO2021139987A1] The invention relates to a packaging machine and a method for adjusting multiple machine elements on a packaging machine, wherein the position of a respective machine element can be changed by rotationally driving an associated spindle, and wherein a position-measuring device is provided on each spindle, with which the position of the associated spindle can be measured, and wherein the measurement data of the different position-measuring devices can be sent to a controller.
