Abstract (en)
[origin: WO2021130721A1] An electrical switch includes a main body, a button tiltably pivoted to the main body, a switching mechanism, housed inside the main body and configured in such a way as to control the opening and closing of an electrical contact through an oscillation movement of a relative actuation element and an amplification mechanism of the oscillation movement of the actuation element which includes a motion transformation element connected to the main body and jointed to the actuation element and urged by the tilting of the button so as to displace the actuation element.
