Abstract (en)

[origin: WO2021144515A1] The invention relates to an attachment system on a mast for a medical device (2), the attachment system comprising a body (10) equipped with the medical device and from which two jaws (12) protrude facing each other, delimiting between them an open engagement recess (14) for the mast ending at the body with a bottom (14b) which gradually decreases along a frustoconical portion in order to adapt to masts of different diameters, the two jaws (12) being externally threaded by a thread (15) comprising a tapped ring (16) and a tubular support skirt (26) for the jaws (12), this tubular skirt extending coaxially inside the tapped ring (16) in order to allow the engagement of the jaws (12) between the tapped ring (16) and the tubular skirt (26) and the screwing of the tapped ring on these jaws.
