Abstract (en)  
[origin: WO2021144157A1] The invention relates to a method 151 for the digital documentation and simulation of a personnel transport installation 11 by means of a detection device 201. Connection components VE are fitted by means of a tool WZ of the detection device 201, wherein the detection device 201 here measures the position POS and installation parameters EP of said components during fitting, and this data is entered in a position-defined manner into a digital doppelganger data set 111 mapping the physical personnel transport installation 11 as installation data sets DS.
