Abstract (en)

[origin: WO2021144192A1] The invention relates to a method for producing a surface-treated and surface-conditioned steel sheet (11), said method having the following steps: providing a steel sheet (1) with a zinc-based coating (1.1) which has a first degree of surface roughness (1.2), and - skin-pass rolling the surface-treated steel sheet (10) such that pressed regions and non-pressed regions are formed on the surface of the steel sheet (1) provided with a zinc-based coating (1.1). According to the invention, the skin-pass rolling step is carried out with a degree of skin pass of more than 1% such that a second degree of surface roughness (1.3) which differs from the first degree of surface roughness (1.2) is formed in the non-pressed region.
