Abstract (en)

[origin: EP4091482A1] Provided is a method for manufacturing a heater for heating a flavor source, in which a heat generating resistor layer is formed on a main surface, a rear surface, and one side surface. The method includes the steps of forming a heat generating resistor layer by plating on a surface of a plate-like base material and forming an unplated region in the plate-like base material on which the heat generating resistor layer is formed.
