Abstract (en)
A rotary brush (14) for a wet floor cleaner has a cylindrical inner core (40) and a cleaning member disposed around an outer surface of the inner core (40). The inner core comprises at least one rib (48) projecting inwardly from an inner surface (44) and extending along a length of the inner surface parallel to the cylinder axis. This is used to transfer torque from a motor (120), which is preferably housed within the inner core, to the brush, while taking up a minimum amount of space.
