Abstract (en)  
There is described a spout assembly (3) comprising at least a base frame (15) for coupling the spout assembly (3) about the opening and a collar (16) having a drinking mouth (17) and being arranged at a first end (19) of the collar (16) and configured to allow a consumer to consume the pourable product. The base frame (15) comprises a first portion (34), a second portion (35) and a fold line (36) connecting the first portion (34) and the second portion (35) with one another. The fold line (36) is configured to allow that the first portion (34) and the second portion (35) can be transversally arranged with respect to one another. The collar (16) comprises a rim (20) defining an inlet opening (21) arranged at a second end (22) of the collar (16) opposite to the first end (19) and the rim (20) comprises a coupling portion (37) being adjacent to the fold line (36).
