Abstract (en)
[origin: EP4092227A1] Clamping element (1, 1', 1'') for slats (A) for privacy fencing, comprising a curved elastic fixing sector (2, 2', 2'') that can be fixed on a transverse rod (B) of the enclosure grid, a flat elastic support sector (3), which can be inserted into a slat (A) and which has a lower recess (4) on the perimeter edge of which a projection is located, wherein the base (6) of the elastic support sector (3) has a notch (7) that has the same orientation and dimensions as the projection (5), so that the clamping element (1, 1', 1'') can be coupled to an identical clamping element (1, 1', 1'') engaging its lower recesses (4) and its elastic support sectors (3) being contained in the same plane with its ends (8), located opposite to its base (6), oriented in opposite directions.
