Abstract (en)  
A heat pump comprising a housing, a fan, and a tube system for circulating circulation fluid:- the housing adapted to be arranged on a substantially horizontal base area, the housing having a bottom profile including at least one supporting element with which the housing, when installed, rests on the base area and a portion that is recessed with respect to the supporting element, the recessed portion spaced apart from the base area so that air can flow into the housing from below;- the tube system surrounded by the housing, arranged in a horizontal plane,; and- the fan operable to generate an air flow through the housing and across the tube system, for the exchange of heat between the air and the circulation fluid.
