Abstract (en)

[origin: WO2021151061A2] A biopsy and aspiration device that can include an outer cannula that has a plurality of apertures formed in an outer surface, a biopsy stylet insertable into the outer cannula having a beveled tip portion and slits formed in the main body, and an aspiration stylet also separately insertable into the outer cannula having a plurality of apertures formed in the main body and an optional sealing element associated therewith. One or more of the apertures of the aspiration stylet can be aligned with one or more of the apertures of the outer cannula.
