Abstract (en)
[origin: WO2021148450A1] The present invention relates to a sterile container for sterilizable medical goods, comprising a receiving space for the medical goods and a data acquisition unit for acquiring parameter data of influencing variables that act on the sterile container, wherein the sterile container comprises an NFC module (1) with at least one sensor for acquiring sterility-relevant and/or sterilization-relevant data and a data logger for recording and storing data from the sensor at a recording interval. Moreover, the invention relates to a method for monitoring such a sterile container in automatic and sterile container-specific fashion.
