Abstract (en)

[origin: WO2022175740A1] The invention relates to a wet palette for water-based paint that comprises a flat container (1) having a peripheral rim and, in its operational state, contains water (4). A water (4) retaining structure (2), preferably a sponge or foam, is placed in the flat container (1) and arranged so as to become impregnated and moistened by contact with and absorption of the water (4) contained in the flat container (1). A sheet of water-permeable paper (3) is positioned on the retaining structure (2) and, in its operational state, is in contact with the water-based paint (5) applied to an upper face of the sheet of paper (3). The sheet of paper (3) is a sheet of coated one side (C1S) paper having wet strength, i.e. a sheet of machine finished coated (MFC) paper or a sheet of cast coated paper, the coated upper face of which is used, in its operational state, as a support for the application of the water-based paint (5).
