Abstract (en)

[origin: WO2021148725A1] The invention relates to the use of a heat-transfer composition comprising at least one refrigerant selected from halogenated hydrocarbons, perhalogens, fluorinated ketones, fluorinated ethers and combinations thereof, and at least one dielectric fluid, for cooling a battery of a device such as an electric or hybrid vehicle, the heat-transfer composition having a volume resistivity greater than or equal to 106Ω.cm at 25 °C.
