Abstract (en)

[origin: WO2021148082A1] The invention relates to an actuation device for a motor vehicle lock, in particular a motor vehicle door lock-closing device. The device is equipped with an electromotive drive (1) and a lever assembly (2, 3) which follows the drive (1). The lever assembly (2, 3) has two actuation levers (2, 3) which are biased against each other by a spring (9) and which are connected together in a pivotal manner, wherein the output-side actuation lever (3) acts directly or indirectly on an actuator (4). According to the invention, a sensor (7) is also provided which detects a movement of the two levers (2, 3) relative to each other.
