Abstract (en)

[origin: EP4095049A1] It is described a sterilization machine (1) for sterilizing caps (2), comprising at least: an isolation chamber (3) defining an inner space (4); one guide (6) arranged within the inner space (4) and defining an advancement path (P) for the caps (2), the machine (1) being configured so that the caps (2) are sterilized during advancement along said advancement path (P); wherein the guide (6) comprises a plurality of bars (25a, 25b, 25c) which defines a channel (26) for guiding the advancement of said caps (2) along the advancement path (P), said channel (26) having, transversally to said path (P), a first size (h) and a second size (w), which first size (h) and second size (w) are transversal to each other; wherein the sterilization machine (1) also comprises an adjustment system (30) configured for acting on at least two of said bars (25a, 25b, 25c) to adjust said height (h) and width (W) independently from each other.
