Abstract (en)

[origin: WO2021148707A1] The invention relates to a capping device intended to be secured to the neck (2) of a container having an opening (3), the capping device including: - a cap (1) which has a helical thread (7) intended to cooperate with a helical thread (6) formed on the neck (2); - a lower ring (9) secured axially to the neck (2); and - a hinge device that connects the cap (1) to the lower ring (9). In addition, the capping device includes a cap locking device configured to lock the cap (1) in an open tilted position, said locking device including a flange (22) formed between the two sheets (11, 12) and configured to rest against the neck (2) of the container when the cap (1) is in the open tilted position, said flange (22) having an internal face on which is formed at least one of the ribs of the series of ribs of the helical thread (7).
