Abstract (en)  
[origin: WO2021151801A1] The invention relates to a respirator mask, in particular a respirator half-mask, for filtering the respiratory air of the wearer, comprising a mask main part (2) for covering the nose and mouth of the wearer and at least one inhalation valve assembly (11) arranged on the mask main part (2). The respirator mask additionally has at least one fold assembly (24) which is arranged upstream of the at least one inhalation valve assembly (11) in the inhalation flow direction (18) and on the mask main part (2). The fold assembly (24) can be moved between an unfolded functional position and a folded transport position and is at least partly made of a filter material.
