Abstract (en)  
[origin: WO2021151874A1] The invention relates to a device and a method for producing dialysate, the device having a first part and a second part in the form of a circuit, wherein: the first part comprises a water connection, or a water container and the primary side of a filter, the filter being designed to produce purified water, from the water, by forward osmosis; the second part comprises the secondary side of the filter, a reservoir, a filtrate line, which runs from the secondary side of the filter to the reservoir, and a line running from the reservoir to the secondary side of the filter; and wherein the reservoir is a container having means for connecting the container to a dialysis machine.
